Inside Blinds must be made of clear lumber suitable for oil finish. Workmanship must be good.

WOODS ADMISSIBLE.

Woods other than Michigan, Wisconsin and Minnesota or Western Pine shall be admitted in Doors, Blinds and Windows.

DIRECTIONS FOR ORDERING.

Time, Annoyance and Expense can be Saved by Noting and Following Closely the Suggestions Below:

We will understand all orders and inquiries as calling for **Regular Ohio Style and Sizes** as described in this catalogue, unless specifically ordered otherwise, or unless covered by standing instructions to the contrary.

Be Explicit in ordering. Do not assume that we know what you want.

Always give **width** first, length or height second, then thickness.

Always use inches to designate glass sizes, and feet and inches for openings or outside measurements.

SASH and WINDOW.

The term "Sash" indicates only one piece to fill opening.

The term "Window" indicates two pieces (upper and lower sash).

State size of glass, number of lights, opening (unless regular stock) and thickness. State whether open or glazed, and if glazed whether single or double strength.

If a window whether check or plain rail.

If segment or circle head give number of style desired (see page 41) and radius of circle or segment if not regular. When not otherwise specified we will furnish Circle Head made Style No. 2 with a radius one-half the width of the sash less the width of the stile, and for Segment Head made Style No. 4 with a radius the width of the sash less the width of the stile.

When an odd sash or window is ordered always give both glass size and number of lights and outside opening, and if possible send sketch.

If glass sizes only are given we will understand that regular stock widths of stiles, rails and bars are required.

Note—All windows and sash are understood to be glazed unless ordered open specifically. All glazed windows are primed or oiled one coat unless otherwise ordered.

DOORS

In the absence of other instructions we will consider an order or inquiry for doors to call for the Standard Four Panel O G Door No. 1 quality.

State width, height and thickness, number of panels and arrangement of same and quality.

DIRECTIONS FOR ORDERING.

DOORS—*Continued.*

State style of sticking unless O G is desired.

If molded state whether flush or raised mold one or two sides.

If oil finish state whether machine smoothed or hand smoothed is desired.

If odd send sketch or detail.

Odd doors will be made with regular stock widths of stiles, rails, muntins and panels unless specifically ordered otherwise.

OUTSIDE BLINDS.

We will understand all orders for blinds to call for **Regular Ohio Stock Styles and Sizes,** 1⅛ inch rolling slats unless specifically ordered otherwise.

State size and number of lights of window for which blinds are ordered, also thickness of blind, and whether all rolling slats (R. S.), stationary slats (S. S.), or half rolling and half stationary (½ R. S. ½ S. S.)

If odd give outside opening, thickness, arrangement of slats and send sketch.

The regular stock blind is the width of the window to be covered and one inch longer.

Blinds for brick buildings must be so specified, and will in the absence of additional instructions be made two inches longer than window opening.

A blind indicates a single piece to fill opening.

A pair of blinds indicates two pieces to fold together to fill opening.

A set of blinds indicates more than two pieces, and should always be accompanied by sketch.

INSIDE BLINDS.

Inside blinds we will understand are to be made four-fold, 1⅛ inch thi k, outside panel and inside slats; made to be cut in the center unless otherwise stated.

Give exact outside opening always, thickness, number of folds and arrangement of panels or slats (see page 74).

If cut twice or more specify height from top to each cut.

If wanted to fold into box give width of outside folds.

If not the usual arrangement of panels or slats, always send sketch.

In ordering above specify width and height.

For prices see page 45.

CIRCLE and SEGMENT TOP WINDOWS

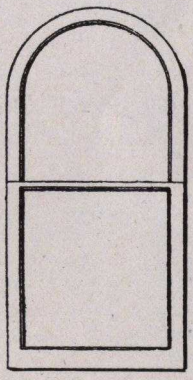

Fig. 1.
Circle inside and outside.
Radius, one-half width of sash

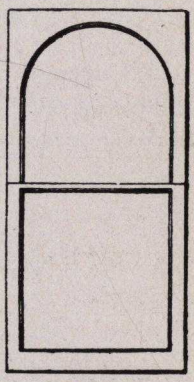

Fig. 2.
Circle outside, square inside.
Radius, one-half width of sash.
(Less width of one stile.)

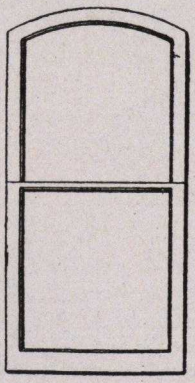

Fig. 3.
Segment inside and outside.
Radius, width of sash

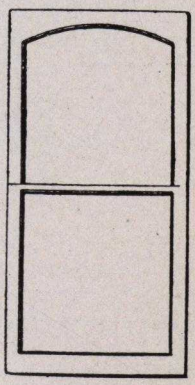

Fig. 4.
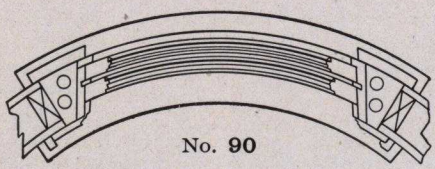
Segment outside, square inside.
Radius, width of sash.
(Less width of one stile.)

For segment, circle or gothic windows always give radius if not as above. If not given it will be understood that the regular radius as indicated above will apply.

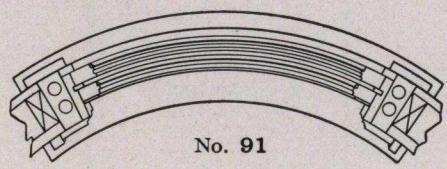
For prices, Figures 1, 2, 3 and 4 see page 44.

CIRCLE-FACE WINDOWS

When ordering, give radius measured to outside of top sash, and say whether frames are made with square jambs like No. 90, or radiating jambs like No. 91.



No. **90**



No. **91**

A full size paper pattern of sill sent will prevent errors.

If made like No. 91, give distance measured straight across between jambs from outside edges of the top sash.

For prices on Bent Windows see Rule 16, page 50.

LIST PRICES OF CUT UP OR FANCY TOP WINDOWS AND SASH

To arrive at list prices for Cut Up or Fancy Top Windows or Sash add to the list price of one-light Sash or 2-light Window, as the case may be, for designs shown on pages 30, 33 to 35, 39 as follows:

Design No.	1⅜ Open	1⅜ Glazed
17	$ 9.10	$10.35
18	14.20	16.30

For 1¾-inch thick Windows or Sash of the above designs add to the 1⅜ full Open list 40% of the extra provided for 1⅜ Open Windows or Sash of similar design.

For other Fancy or Cut Up Sash see Rule 4.

List prices on the above designs are based on the exact number of lights shown in cuts, and price will vary in proportion as there may be more or less number of lights in the article made owing to size or otherwise.

For Windows or Sash glazed with white chipped, Florentine or similar glass of equal value add to glazed list for each square foot of glass measure, list 40c.

SEGMENT, CIRCLE or GOTHIC HEAD SASH.

VENEERED DOORS

WHAT WE DO AND WHAT WE DO NOT GUARANTEE

We do not guarantee our Veneered Doors unless certain necessary conditions are complied with.

First, it should be remembered that all the material in a Veneered Door is thoroughly kiln-dried, and if exposed to the weather will absorb any moisture in the atmosphere, as doors are shipped, as a rule, in the white. If shipped by local freight, we cover the doors with paper and crate them. This is sufficient to protect them under ordinary conditions until they reach destination. When the doors are received, they should be examined carefully, and if they have been damaged by exposure or rough handling while in transit, call the attention of your local railway agent to the matter, and have him make proper notation on the face of the expense bill. This will insure favorable consideration of a claim for damages. Doors should also be inspected at this time as to material and workmanship, as any claim of this character must be made while the doors are in the possession of the dealer. When taken from the crates, unless stored in a dry place, a coat of good stain or filler should be applied at once. Oak, being a porous wood, requires a pigment filler, but Birch, being a close-grained wood, should be given a coat of shellac, unless it is to be stained, in which case stain should be applied first.

DO NOT PUT VENEERED DOORS IN BUILDING UNTIL THE WALLS AND PLASTER ARE THOROUGHLY DRY

It should hardly be necessary to call attention to the fact that a veneered door must not be stored or hung in a building until the walls and plaster are thoroughly dried out, but we find that either through ignorance or carelessness this is frequently done, and we want it understood that under such conditions we will not assume any responsibility. If any complaint is made by your customer, we will ask that you investigate the matter carefully, as the chances are three to one the doors have either been put in a building before it was thoroughly dry, hung where exposed to the weather without protection of a deep porch or overhead projection, or have been improperly treated by the finisher.

CARE OF EXTERIOR DOORS

All outside doors should have at least one coat of good exterior varnish and the top and bottom edges thoroughly painted with lead and oil as soon as the door is fitted. We do not recommend, nor will we guarantee, a veneered door for outside use when not protected from the weather by a wide porch or overhanging projection. Doors that are exposed to the weather should be made of solid Pine, Fir, or Hardwood, either one, two or three-ply.

DO NOT REPAIR OR REPLACE ANY OF OUR DOORS WITHOUT OUR CONSENT

We will not consider any claim for cost of repairing or replacing any of our doors unless the matter has been referred to us and authority given for such exchange or repairs being made.

WHAT WE DO GUARANTEE

If the above suggestions are complied with, we guarantee our Veneered Doors both as to material and workmanship, and will gladly repair or replace any defective door sold by us.

WIRE GLASS

Recommended by the Boards of Fire Underwriters of All Principal Cities in the United States as a Perfect Fire Retardant

Some Advantages of "WIRE GLASS" WINDOWS

They offer a positive resistance to spread of fire.

Shutters must be opened for lighting, closed for protection.

Windows are shut nine times where shutters are closed once.

Closed shutters hinder the watchman from detecting an interior fire.

"Wire Glass" windows aid the watchman; the blaze will reveal the fire.

Closed shutters are an obstacle to the fire department.

"Wire Glass" windows can readily be broken through by the axes in the hands of the firemen.

"Wire Glass" windows admit light, giving access to the building at all times without the labor of opening shutters.

"Wire Glass" in approved metallic frames or sashes will reduce rate of insurance in many cases **10%** or more.

FULL SIZE DETAILS OF "WIRE GLASS"

Shown in Illustrations

POLISHED A product equal in strength with respect to the fire and break hazards, to the better known Ribbed, Holly and Rough or Hammered "Wire Glass," and possessing at the same time complete transparency and adaptable for all purposes where "Wire Glass" is demanded together with an unobstructed vision.

MAZE Is the ideal surface for high-class mercantile structures, office buildings, hotels, apartment houses, colleges and schools, and all places where greatest distribution of daylight is desired, together with exclusion of vision.

RIBBED Adapted to skylight service in factories, warehouses, piers, power plants, etc. It is patterned in accordance with Edward Atkinson's specifications for maximum diffusion of light.

ROUGH A semi-transparent fire-retardant glass for use where complete vision or decorative effect is not particularly essential. Used in skylights, windows and doors of all classes of buildings, and most extensively employed in factories, mills, warehouses, train sheds and power buildings.

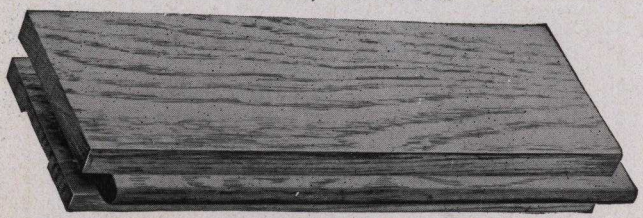
HARDWOOD FLOORING

PLAIN OR QUARTER-SAWED RED OR WHITE OAK, MAPLE, CHERRY, WALNUT.



Nothing is more characteristic of the modern home or shares more pride of the home builder than the glistening hardwood floor. First, because it is so prominently attractive and also because it is so sanitary, durable and economical.

We can furnish for prompt shipment:

3/8 x 1½ in. face	13/16 x 1½ in. face
3/8 x 2 in. face	13/16 x 2 in. face
	13/16 x 2½ in. face

13/16 in. flooring is end matched and hollow backed.
3/8 in. flooring is end matched but not hollow backed.
13/16 x 2 in. and wider counted ¾ in. more than finished face.
13/16 x 1½ in. and all widths 3/8 in. counted ½ in. more than finished face.

TO REDUCE SURFACE MEASURE TO STRIP COUNT:

3/8 x 1½ in. face add 33⅓% to surface measure.
3/8 x 2 in. face add 25% to surface measure.
13/16 x 1½ in. face add 33⅓% to surface measure.
13/16 x 2 in. face add 37½% to surface measure.
13/16 x 2¼ in. face add 33⅓% to surface measure.

When ordering specify: Thickness; width; grade; whether plain or quartered; whether red or white; and whether quantity given is surface measure or strip count.

HOW TO LAY, FINISH AND CARE FOR A HARDWOOD FLOOR.

The finest flooring material will not make a satisfactory floor unless properly laid under proper conditions. Before hardwood flooring is laid, the building should be thoroughly dry and the surface on which it is to be laid should be smooth and clean.

Oak flooring should be scraped evenly and sandpapered smooth, then filled with a "wood filler" and allowed to stand eight to ten hours. If a varnish finish is desired, apply two coats of very thin varnish, allowing the first coat to dry thoroughly before applying the second. If a wax finish is desired, apply two light coats of white floor shellac, allowing the first coat to stand a day before applying the second. Before applying the wax, use a No. 0 sandpaper on the surface, lightly removing any specks or lines that may have appeared. Apply the wax by using weighted brush made for this purpose, brushing across the grain, and then lengthwise, and repeat until brush slips easily, then place a piece of soft carpet under the brush and continue rubbing until the desired polish is obtained.

GLOSSARY OF TRADE TERMS

The definitions below give the meaning of various terms used in this book or in quotations affecting articles described as established by general usage.

IN GENERAL.

MEASUREMENTS.

OUTSIDE OPENING—The measurement of any given article from outside to outside. The frame opening. Always should be given in feet and inches.

BETWEEN GLASS—The difference between the outside opening and the total glass measurement of a given window or sash.

FACE MEASURE—The measurement of any part of an article exclusive of any solid mold or rabbet.

FINISHED SIZE—The measurement of any given part of an article over all or including the solid mold or rabbet.

RIPPING SIZE—The size of stock necessary to produce any given finished size. Usually ¼ inch over finished size up to 5 inch cuts and ½ inch over above.

MOLDING

SOLID MOLD or SOLID STUCK—A mold which is worked on the article itself.

APPLIED MOLD—A separate mold applied or attached to any part of an article.

FLUSH MOLD—An applied molding which finishes flush with or below the face or surface of the stiles or rails of the article.

RAISED MOLD—An applied molding which partly covers or which extends above the face or surface of the stiles or rails of the article.

MULLION.

An upright or vertical bar, usually wider than the ordinary bar, dividing the glass in a sash, or a wide upright bar dividing two sash in a frame. Applied also to single blinds made to represent pairs.

MUNTIN.

Applies to any short or light bars—either vertical or horizontal—in a sash or in a door between panels not extending the full width or length of the article.

ODD WORK.

This term applies to any article which is not listed under listed sizes, or for which a list must be formed by the application of any of the Foot Notes or Rules for Extras—unless these specifically state to the contrary.

RAIL.

The cross or horizontal pieces of the framework of a sash, door or blind.

STILES.

The upright or vertical outside pieces of a sash, door or blind.

STOCK QUANTITY.

Ten or more of any given article of one kind, size and quality.

STICKING. (See Solid Mold.)

O. G.—A solid mold which is a combination of a cove and a quarter round with no fillet between.—The standard sticking for doors, sash and blinds.

COVE AND BEAD—A solid mold which is a combination of a cove and quarter round with a small fillet between.

BEAD AND COVE—A solid mold which is a combination of a quarter round and cove with a small fillet between and on each side.

OVOLO—A solid mold which is a quarter round with a small fillet on each side.

P. G.—A solid mold which is a long bevel with a small fillet on each side.

APPLYING TO SASH OR WINDOWS.

SASH.

A sash indicates a single piece to fill a given opening.

WINDOW.

A window indicates two pieces—one upper, one lower—to fill an opening arranged to slide vertically.

CASEMENT.

Applies to a sash or pair of sash made to be hung on hinges to swing.

COTTAGE.

COTTAGE WINDOW—A window in which the meeting rails are placed above the center of the opening.

COTTAGE SASH—A sash made to correspond to a cottage window.

FRENCH WINDOW.

A pair of sash made to be hung on hinges like a pair of doors—A long pair of casement sash.

FACTORY SASH OR WINDOWS.

Sash or windows divided into small lights for factory use—The term implies an inferior quality of material for paint, permitting the use of reasonable defects of any nature not weakening the sash.

FULL BOUND.

This term indicates that the sash so described shall have a similar amount of wood in stiles and top and bottom rails, usually described as "same rail all around."

MEETING RAILS.

The rails of a window which meet when the window is hung and closed.
PLAIN RAIL—Meeting rails of the same thickness as the rest of the window.

CHECK RAILS—Meeting rails sufficiently thicker than the window to fill the opening between the top and bottom sash made by the check strip or parting strip in the frame. They are usually beveled.

LUGS OR HORNS.

An extension of the stiles of a window beyond the meeting rails. They are usually molded on the inside of the stile with an O. G. Mold—(O. G. Lugs).

QUEEN ANNE.

Windows or sash divided into small lights.

SUSPENDED LIGHTS.

A term applied to a light within a sash, formed by straight bars, any one of which must be attached to the free end or to the beveled joint of other bars are munts.

APPLYING TO DOORS.

ASTRAGAL.

MOLD—For Folding Doors—A strip of molding the length of the door of any desired pattern to be applied to one of a pair of folding doors so as to form a rabbet.

SINGLE—For Folding Doors—A strip the length of the doors with a cross-section usually similar to a letter "T"—used to form a rabbet

DOUBLE—For Sliding Doors—A pair of strips the length of the doors—rabbeted to receive the doors on the back and molded or grooved reciprocally on the face to make a tight joint.

JOINT—For Sliding Doors—A molding or groove worked reciprocally on the meeting edges of each of a pair of doors to make a tight joint

BANDED DOORS.

Doors with a thin band or strip—usually molded—on the outside edge of the face of each stile and top and bottom rail—Also called friction strips.

CHAMFERED DOORS.

Doors with the corner of the stiles or rails beveled at an angle of about 45 degrees.

STOP CHAMFER—A chamfer stopped or ended short of the length of the piece chamfered.

DOWELED DOORS.

Doors put together with dowels instead of tenons.

DUTCH DOOR.

A door made to be cut horizontally through the lock rail so that the upper part can be opened independently of the lower part.

FOUR-PANEL DOOR.

Unless specifically otherwise stated is understood to mean the standard listed four-panel door No. 200.

FIVE-PANEL DOOR.

Unless specifically otherwise stated is understood to mean the standard listed five-panel lock rail panel door No. 201.

PANELS.

Bevel raised panels are standard.

GRADUATED PANELS.

Doors with cross panels of a different width usually graduated from a wide lower panel to a narrow top panel.

LOCK RAIL.

The center rail of a standard four-panel door.

PANEL—The horizontal panel of a standard five-panel or similar door.

TENONS.

THROUGH TENONED—A door made with tenons on the end of the rails mortised or tenoned through and showing on the outside of the stile.

BLIND—TENONED OR MORTISED—A door made with the tenons on the ends of the rails mortised into but extending only part way through the stile.

APPLYING TO BLINDS.

BLIND.

SINGLE—A single blind is one piece to fill a given opening.

PAIR—A pair of blinds is two pieces to fill a given opening, made and rabbeted to fold.

SET—A set of blinds is more than two pieces for a given opening made to fold upon each other.

STATIONARY SLAT BLINDS.

Blinds with slats mortised into or so attached to the stiles as to be fixed.

HALF STATIONARY BLINDS—Blinds with one panel of movable or rolling slats, and one of stationary or fixed slats.

SHUTTERS.

Blinds with solid panels instead of slat panels.

BEAD AND BUTT SHUTTERS.

Shutters with panels flush with the stiles and rails on one side and with beads lengthwise of the panels, at or near the stiles on one side only.

FLUSH MOLD.

See Flush Mold under "General."

APPLYING TO TERMS AND DISCOUNTS.

CAR LOTS.

Quantities of mill work sold at one time for shipment at one time which aggregate the minimum weight allowed by the published railroad tariff for the given destination—usually 24,000 pounds.

LOCAL OR WAY FREIGHTS.

Terms applied to sales or shipments which for any reason take less than car lot rates of freight.

CASH DISCOUNT.

A discount allowed for payment of an invoice within a specified time from date of invoice. It does not apply to any freight or other allowance, which should always be deducted before cash discount is taken.

F. O. B. OR FREE ON BOARD.

This term indicates that the quotation or sale is made for goods on the cars at seller's shipping point without charge for loading or handling.

FREIGHT ALLOWED.

Signifies that the seller will allow the purchaser on presentation of paid freight bill to deduct from settlement the full amount of freight paid on any given shipment from shipping point to destination. It does not guarantee the safe delivery of goods.

FREIGHT EQUALIZED.

Signifies that the seller will allow the purchaser on presentation of paid freight bill to deduct from the settlement an amount equal to the excess—if any—of the amount paid for freight over the sum which the buyer would have had to pay on a similar shipment from the point equalized with. It does not guarantee safe delivery of goods.

OPENINGS.

Quotations are frequently made at a specified discount for a given number of openings.

In this connection an opening is understood to mean

One Door or two Cupboard Doors.
One Window.
Two Sash.
One Pair of Blinds or two Single Blinds.

STOCK GOODS OR STOCK ITEMS.

Terms frequently used in quotations to indicate such listed sizes as are regularly carried in stock by the party quoting. Must not be confused with "listed sizes" which may be "stock sizes" in one locality and not in another.
